COMPANY NAME AND ADDRESS

### Job Application for Software Engineer

Dear Mr./Ms./Dr. LastName,

### About Me

I'm a young guy, ambitious, trained mathematician, who is very passionate about computers. With a quite academical taste most of the time, finding correct solutions to any facing problem is perhaps my biggest hobby. I believe that *if you're not growing, you're dying*; as such, I strive every day to reach further, dreaming of the things I'm yet to learn and the problems I'm yet to solve. I take care of my time to the detail, always seeking to invest in myself and my beloved ones, in all fields of my life. Little things give me as much pleasure than a well done job, whether it's about a training in the gym, a bike trip, the last novel I read, the dinner I prepare for my girlfriend, the ongoing research I'm digging into, or the problems I find in my workplace.

### Why You?

Suspendisse commodo, massa eu congue tincidunt, elit mauris pellentesque orci, cursus tempor odio nisl euismod augue. Aliquam adipiscing nibh ut odio sodales et pulvinar tortor laoreet. Mauris a accumsan ligula. Class aptent taciti sociosqu ad litora torquent per conubia nostra, per inceptos himenaeos. Suspendisse vulputate sem vehicula ipsum varius nec tempus dui dapibus. Phasellus et est urna, ut auctor erat. Sed tincidunt odio id odio aliquam mattis. Donec sapien nulla, feugiat eget adipiscing sit amet, lacinia ut dolor. Phasellus tincidunt, leo a fringilla consectetur, felis diam aliquam urna, vitae aliquet lectus orci nec velit. Vivamus dapibus varius blandit.

### Why Me?

Experience has shown me and my employers that I always find a solution for whatever problem I encounter. Long time ago, working on a non-IT job related to finances, I realised my entire project was investing so much time in reporting: without anybody asking me, I decided to learn VBA/VBS and C#, and I developed scripts that would do the job; I reduced reporting times for a project of more than a hundred people below half of where they were. In a different job, IT related, I didn't like the way the team was interfacing to the remote ERP databases by mere GUI scripting: I developed C++ small apps to wrap around the native ERP binaries, bypassing the whole GUI, with finer control and deterministic behaviour.

Sincerely,

**Nelson Vides Luzardo**
